

Written reflective account following a MRI.

Points to consider when writing / reviewing this submission.

It is suggested that you use Gibbs' reflective cycle as a framework

Remember reflection is not a summary of events. Focus on what **you** did:-

1. making up the drug
2. labelling the drug
3. attaching the drug

Have you explored your own responsibility and accountability in drug administration?

Have you shown an understanding of the possible implications for the patient?

Have you demonstrated the knowledge needed to perform the task?

What training / competencies have you undertaken?

Can you evidence that you know the policies / procedures surrounding drug administration with reference to :-

- NMC guidelines
- LTHT policies
- PICU policies

What is the impact on yourself of this error?

What would you personally do differently to avoid this happening again?
